Family researchers have called "parenting." The chapters address how children's personal qualities make their mark on families in ways that may in turn influence children's subsequent development. The volume is based on the presentations and discussions from a national symposium on "Children's influence on family dynamics: The neglected side of family relationships" held at the Pennsylvania State University, as the ninth in a series of annual interdisciplinary symposia focused on family issues. It is divided into four parts, each dealing with a different aspect of the topic. Part I sets the stage by focusing on the features of children that make a difference, as well as the kinds of research designs that are likely to shed light on the role of child influences. Part II focuses on early childhood, particularly the role of infant temperament and other individual differences in very young children in shaping their parents' behaviors, reactions in turn that feedback and influence the developing child. Part III focuses on adolescence, a time when young people are able to exert more choice in how they spend their time and who they spend it with. Part IV pulls the themes of the volume together and points the way for future research.

How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of

us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more.

Authoritative yet accessible, *From Neurons to Neighborhoods* presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

family researchers have called "parenting." The chapters address how children's personal qualities make their mark on families in ways that may in turn influence children's subsequent development.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers”—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and

Services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Children's health has clearly improved over the past several decades. Significant and positive gains have been made in lowering rates of infant mortality and morbidity from infectious diseases and accidental causes, improved access to health care, and reduction in

The effects of environmental contaminants such as lead. Yet major questions still remain about how to assess the status of children's health, what factors should be monitored, and the appropriate measurement tools that should be used. Children's Health, the Nation's Wealth: Assessing and Improving Child Health provides a detailed examination of the information about children's health that is needed to help policy makers and program providers at the federal, state, and local levels. In order to improve children's health -- and, thus, the health of future generations -- it is critical to have data that can be used to assess both current conditions and possible future threats to children's health. This compelling book describes what is known about the health of children and what is needed to expand the knowledge. By strategically improving the health of children, we ensure healthier future generations to come.

The essays in this collection deploy biological and social scientific perspectives to evaluate the transformative experience of parenthood for today's women and men. They map the similar and distinct roles mothers and fathers play in their children's lives and measure the effect of gendered parenting on child well-being, work and family arrangements, and the quality of couples' relationships. Contributors describe what happens to brains and bodies when women become mothers and men become fathers; whether the stakes are the same or different for each sex; why, across history and cultures, women are typically more involved in childcare than men; why some fathers are strongly present in their children's lives while others are not; and how the various commitments men and women make to parenting shape their approaches to paid work and romantic relationships. Considering recent changes in men's and women's familial duties, the growing number of single-parent families, and the impassioned tenor of same-sex marriage debates, this book adds sound scientific and theoretical insight to these issues, constituting a standout resource for those interested in the causes and consequences of contemporary gendered parenthood.
