Vehicle Brake Repair Tools & Kits for sale | eBay

Step 1: Prepare the new drum brake. Many drums will become coated in a thin oily film to prevent them from rusting during shipping and storage. If that is the case, be sure to liberally spray the drums with brake cleaner to remove any of the film that may be present before installing them. Step 2: Install the drum brake over the brake shoes. Once the drum is clean and ready to install, slip it over the brake shoes and install it onto the hub.

How to Replace Drum Brakes | YourMechanic Advice

1. Replace the brake spider(s) as determined in the inspection. 2. Reinstall all of the remaining components of the brake assembly, including shoes and drums, in accordance with the normal service protocols outlined in Bendix service manual BW7258. Ensure all hardware is installed

Technical Bulletin - Bendix

Slide the new or resurfaced drum over the wheel studs. Install lock screws in drum if equipped. Adjust the brakes through the drum or through the backing plate till a slight drag on the brake drum is felt. Reinstall the tire. Check brake adjustment and readjust as needed to have a slight drag on the drum.

Just as car brakes are essential, so are caravan brakes || follow Nigel Hutson's DIY guide to adjusting your caravan's brakes, with Practical Caravan By Nigel Hutson Published: March 9, 2015

How to adjust your caravan's brakes - Practical Caravan

Step 1, Loosen the lugs. While the car is on the ground, you should use a lug wrench or an impact wrench to loosen the lug nuts. Doing it this way prevents the tires from spinning. This helps break the lugs loose more efficiently and more safely. Step 2, Jack up the car. Consult your service manual for safe jacking points. Slide the jack under the car and position it directly under the jacking point. Jack the car up and secure it with jack stands. Step 3, Remove the wheels. Now that the car is ...

3 Ways to Service Brakes - wikiHow

Release the parking brake if you're adjusting rear drum brakes. Remove the adjustment hole plug (s) in the brake backing plate or drum, if equipped. Rotate the wheel and make sure that the parking brake isn't causing any brake drag.
