Acids are electrolytes that release hydrogen ions (H⁺) when they are dissolved in water. Bases are electrolytes that release hydroxide ions (OH⁻) when they are dissolved in water. Acid-base balance is primarily regulated by the concentration of H⁺ (or the pH level) in body fluids, especially ECF. © 2017 Ebneshaidi

Fluid, Electrolyte, and Acid-Base Balance

There are three important modes of homeostasis, which include fluid balance, acid-base balance, and electrolyte balance. In this paper, I discuss some concepts involved in fluid, electrolyte, and acid-base balance. The intracellular fluid (ICF) comprises numerous discrete and minuscule cellular packages. The intracellular fluid contains a high concentration of magnesium and potassium.
