The past few decades have seen major impacts of different pandemics and mass casualty events on health resource use in terms of rising healthcare costs and increased mortality. In this context, the development of acute respiratory failure in patients requires the use of mechanical ventilation, either invasive or noninvasive. Recently, noninvasive ventilation (NIV) has proved to be a valuable strategy to reduce mortality rates in patients. This is the first book to describe the clinical indications of NIV in patients who have been hospitalized with high-risk infections as well as in the prehospital management of mass casualty incidents, including chemical or biological disasters and pandemics. Compiled by internationally respected experts, it offers comprehensive coverage of all aspects of noninvasive mechanical ventilation in public health emergencies, such as equipment needs and guidelines for health organizations. Considering recent events (SARS, H1N1 influenza pandemic), the book concludes with a critical review of current studies and future prospects for the use of NIV, offering a valuable resource for all practitioners managing mass casualty incidents and disasters.

This book examines the implementation of Education for Sustainable Development (ESD) programs in schools across Europe. It describes and analyzes how individual countries and the region as a whole have established teaching and learning methods to help students develop the competencies needed to be part of a sustainable society. Featuring chapters written by experts throughout Europe, the book first provides a general overview of ESD in various contexts, including the state-of-the-art of ESD theory and conceptual development; political and social analysis; the various concepts of ESD competencies; and teacher training. Next, the book details how ESD has been implemented in different European countries and regions, including: Sweden, Italy, Germany, Austria, Switzerland, Catalonia, Hungary, Finland, Norway, Denmark, Flanders, France, Cyprus, UK and the Netherlands. In recognition of education as a motor of change, the United Nations General Assembly declared a Decade of Education for Sustainable Development (2005-2014), calling for the integration of sustainable development into all aspects of education and learning. Inside this book, readers will find details on what has been done, as well as assessments of what more could be done, across Europe. It will help readers gain valuable insights into how to help students develop the knowledge, skills and values needed to shape a sustainable future.

It is recognized that aeromonads form the dominant component of the eutrophic freshwater aerobic bacterial population and over the last ten years the many facets of the organisms have attracted much attention. This timely publication presents the latest developments in the biology of Aeromonas and draws on the expertise of an international team of contributors to provide an authoritative and enlightening account of the many species in this genus. Early chapters deal with the taxonomy, isolation and enumeration, and identification of aeromonads. The book goes on to describe subtyping methods for Aeromonas species, the ecology of mesophilic Aeromonas in the aquatic environment, human pathogens (diarrhoeal disease), Aeromonas species in disease of animals, fish pathogens, pathogenic mechanisms, toxins and the Aeromonas hydrophila group in food. This commendable reference source will be of value to all medical and veterinary microbiologists, public health scientists and microbial ecologists.

This book aims to cover the knowledge of protein folding accumulated from studies of disulfide-containing proteins, including methodologies, folding pathways, and folding mechanism of numerous extensively characterized disulfide proteins. Folding of Disulfide Proteins will be valuable supplementary reading for general biochemistry, biophysics, molecular biology, and cellular biology courses for graduate and undergraduate students. This book can also be used for specialized graduate-level biochemistry, biophysics, and molecular biology courses dedicated to protein folding as well as related biological problems and diseases. Will also be of interest to everybody interested in problems related to protein folding, and anyone who is interested in understanding the mechanism of protein misfolding and protein misfolding-related diseases.

Expanded and updated, this second edition considers fish diseases in the context of the fish's environment, and includes coverage of many aspects of microbiology. The authors provide information on the structure of fish in order to help familiarize readers with general fish anatomy. All the bacterial taxa which have been reported as fish pathogens are included, and the material is subdivided for easy reference into sections which deal with characteristics of the diseases, isolation methods, characterization of the pathogens, diagnosis, epizootiology, pathogenicity mechanisms and control. Written by bacteriologists for microbiologists, the book tabulates the identification procedures, and gives characteristics of pathogens, the diseases and their control. As farmed fish are of greater commercial importance, and the consequences of losses attributable to bacterial fish pathogens therefore of greater economic consequence, the authors concentrate on these rather than on wild stocks.

Besides causing direct damage associated with blood feeding and in some cases through the excretion of toxins with their saliva, the main relevance of ticks lies in the wide variety of pathogens that they can transmit, including viruses, bacteria, protozoa and helminths. Owing to socioeconomic and environmental changes, tick distribution is changing with incursions of ticks and tick-borne diseases occurring in different regions of the world when the widespread deployment of chemical acaricides and repellents has led to the selection of resistance in multiple populations of ticks. New approaches that are environmentally sustainable and that provide broad protection against current and future tick-borne pathogen (TBP) are thus urgently needed. Such development, however, requires improved understanding of factors resulting in vector competence and tick-host-pathogen interactions. This Research Topic provides an overview of known molecular tick-host-pathogen interactions for a number of TBPs and highlights how this knowledge can contribute to novel control and prevention strategies for tick-borne diseases.
