*Microbiology covers the scope and sequence requirements for a single-semester microbiology course for non-majors. The book presents the core concepts of microbiology with a focus on applications for careers in allied health. The pedagogical features of the text make the material interesting and accessible while maintaining the career-application focus and scientific rigor inherent in the subject matter. Microbiology's art program enhances students' understanding of concepts through clear and effective illustrations, diagrams, and photographs. Microbiology is produced through a collaborative publishing agreement between OpenStax and the American Society for Microbiology Press. The book aligns with the curriculum guidelines of the American Society for Microbiology. *-BC Campus website.

The past ten years have seen an explosion of useful research surrounding human motivation and emotion; new insights allow researchers to answer the perennial questions, including "What do people want?" and "Why do they want what they want?" By delving into the roots of motivation, the emotional processes at work, and the impacts on learning, performance, and well-being, this book provides a toolbox of practical interventions and approaches for use in a wide variety of settings. In the midst of the field's "golden age," there has never been a better time to merge new understanding and practical application to improve people's lives. Useful in schools, the workplace, clinical settings, health care, sports, industry, business, and even interpersonal relationships, these concepts are profoundly powerful; incorporated into the state-of-the-art intervention programs detailed here, they can enhance people's motivation, emotion, and outlook while answering the core questions of any human interaction.

Presents major theories for systems addressed in generalist practice This text is part of the Connecting Core Competencies Series. Human Behavior and the Social Environment: Social Systems Theory provides an expanded treatment of systems theory, and applies the theory to common social work concerns. The text links systems to social roles, and provides a framework for critical assessment of the theories from the systems/roles perspective. It assesses the strengths and weaknesses of each theory with regard to the value of each theory for social work practice. Social systems theory remains the focus of this text. In addition theories are identified as grand theories, middle range theories, or focal theories, to assist the student in understanding the scope and application of theories across system sizes. This text breaks new ground in using role theory as a middle range theory to address common features of human systems at a level that is more intuitive for students, and yet detailed enough to stimulate independent thinking. The text addresses the standard repertoire of theories, and in addition presents application of the theories to social issues such as violence and addiction. A better teaching and learning experience This program will provide a better teaching and learning experience for you and your students. Here's how: Improve Critical Thinking ◻ Links systems processes and concepts to role theory as a middle range perspective. Engage Students ◻ Relates social systems concepts to the contexts of generalist social work practice Explore Current Issues ◻ Provides an integrative perspective for the diverse theories used by social workers Apply CSWE Core Competencies ◻ The text integrates the 2008 CSWE EPAS, with critical thinking questions and practice tests to assess student understanding and development of competency. Support Instructors | An Instructor's Manual and Test Bank, Computerized Test Bank (MyTest), BlackBoard Test Item File, and PowerPoint presentations are included in the outstanding supplements package.
