Abstract Despite considerable evidence that neuronal activity influences the organization and function of circuits in the developing and adult brain, the molecular signals that translate activity into structural and functional changes in connections remain largely obscure. This review discusses the evidence implicating neurotrophins as molecular mediators of synaptic and morphological ...

Dendritic spines are morphological specializations that receive synaptic inputs and compartmentalize calcium. In spite of a long history of research, the specific function of spines is still not well understood. Here we review the current status of the relation between morphological changes in spines and synaptic plasticity. Since Cajal and Tanzi proposed that changes in the structure of the ...

Thus, neuro-glial plasticity may regulate GnRH release, gonadotropin secretion, and gonadal growth. The molecular link between this neuro-glial plasticity and photoperiodically generated T 3 remains to be clarified in future studies. Acknowledgments. We thank Dr. Park for providing LRH-13 antiserum.
