Expressions Sap  
SQL expressions are  
useful in optimizing  
report performance  
because the tasks  
they execute are

# Where To Download Sql

Expressions normally performed on the database server (as opposed to a regular formula, which is sometimes executed on the local machine).

## SQL Expressions - SAP

Expressions are formed from several different kinds of elements, such as

# Where To Download Sql

constants, column names, SQL operators, and subqueries. We use cookies and similar technologies to give you a better experience, improve performance, analyze traffic, and to personalize content.

## Expressions - SAP

Expressions are used

# Where To Download Sql

in many different places. Expressions are formed from several different kinds of elements. These are discussed in the sections on functions and variables. You must be connected to the database to evaluate expressions.

## Where To Download Sql

**COUNT(<expression>)**  
returns the number of non-NULL values for that expression returned by the query.

**COUNT(DISTINCT <expression\_list>)**  
returns the number of distinct values for that expressions returned by the query, excluding rows with all NULL values

# Where To Download Sql

for that expression.

MIN . Returns the minimum value of the expression. MEDIAN

Expressions - SAP  
Help Portal

In SAP HANA, p1, e1, p2, e2 and e3 can be evaluated in any order. But let's assume for example's sake that p1 would always return TRUE,

# Where To Download Sql

and e2 would always throw an exception. If the order chosen is  $p1 > e1 > p2 > e2 > e3$ , and since p1 returns TRUE, then e1 is evaluated and returned as the result of the CASE expression.
