I’ve often wondered why so many people will vote for Trump, despite his many cataclysmic negative personal qualities. I’m glad that Chloe Valdary asked Trump voters to respond to her Twitter account by stating why they support Trump. She has received more than 300 responses that I found interesting to review.

**Why Are So Many People Voting for Donald Trump ...**

They reject that life-giving message and pursue their own path to a god they can control by their own efforts. The existence of so many religions is a testimony to humanity’s rejection of the one true God. Mankind has replaced Him with gods that are more to their liking. In a sense, all religions do lead to God, but not in the way most people think.

Answer: The existence of so many religions and the claim that all religions lead to God without question confuses many who are earnestly seeking the truth about God, with the end result sometimes being that some despair of ever reaching the absolute truth on the subject. Or they end up embracing the universalist claim that all religions lead to God.

### Why Are There So Many Banking Crises The Politics And Policy Of Bank Regulation

Almost every country in the world has sophisticated systems to prevent banking crises. Yet such crises--and the massive financial and social damage they can cause--remain common throughout the world. Does deposit insurance encourage depositors and bankers to take excessive risks? Are banking regulations poorly designed? Or are banking regulators incompetent? Jean-Charles Rochet, one of the world’s leading authorities on banking regulation, argues that the answer in each case is “no.” In Why Are There So Many Banking Crises?, he makes the case that, although many banking crises are precipitated by financial deregulation and globalization, political interference often causes--and almost always exacerbates--banking crises. If, for example, political authorities are allowed to pressure banking regulators into bailing out banks that should be allowed to fail, then regulation will lack credibility and market discipline won’t work. Only by insuring the independence of banking regulators, Rochet says, can market forces work and banking crises be prevented and minimized. In this important collection of essays, Rochet examines the causes of banking crises around the world in recent decades, focusing on the lender of last resort; prudential regulation and the management of risk; and solvency regulations. His proposals for reforms that could limit the frequency and severity of banking crises should interest a wide range of academic economists and those working for central and private banks and financial services authorities.

If computers reduce everything to the binary number system of 0s and 1s, then why are there so many programming languages? In this book, readers explore how different languages have developed to fill specific needs and solve unique problems. Readers will also review the historical development path of languages and see how the future of programming may not even involve coding. Topics include scripting versus computing languages, content-specific programming, and special needs programming. Helpful diagrams and accessible language make this a programming guide every young coder should have on their bookshelf.

Two men in 1980s Pietermaritzburg are drawn to the same woman, Abby, quickly becoming each other’s nemesis in a political climate where resistance of any kind often invited executions, factional clashes, clandestine activity, treachery and entrapment. Abby unwittingly becomes the object of a dangerous obsession as the archenemies, not content with displacing the other in her affections, play to ensure the other’s annihilation, none foreseeing the theatre their deadly encounter would be staged, culminating in a clash that potentially destabilizes the entire region and, for one of them, leaves a lasting legacy of shattered hopes, broken dreams, a life destroyed.

The history of humanity has only just begun. The Neolithic Revolution may have endowed us with unparalleled means of communication, subsistence, and knowledge acquisition. However, it is clear in today’s world that inequality, power hierarchies, and violence persist on a greater scale than ever before. In these two lectures, delivered to the large number of young people who gathered in the Lycée Henri-IV and the École nationale des Beaux-Arts in Paris to hear him speak, Alain Badiou argues that we are still firmly rooted in the Neolithic era, subjugated by the structures of political power – property, family, and state. He calls for a second revolution to restore to each person their freedom and agency. Through an analysis of recent attempts at political organisation, including the Arab Spring, Occupy, and Nuit debout, Badiou shows that progress toward this goal will only be achieved through an emphasis on sameness, not difference. This rallying cry to the young from one of France’s most renowned radical thinkers will appeal to the many who read and follow his work, and to the millions of young people around the world who are passionate about redressing the deeply entrenched inequalities and divisions in our societies today.

This book is a valuable resource that connects prior reading experiences in the world to new ones. Young readers' natural curiosity of the world, paired with interactive, engaging strategies, make learning fun. Beginning readers will enjoy the hands-on learning.

On a hot August morning in 1892 in a town in the Italian province of Avellino, in secrecy in the cellar under the house of a prominent family, a baby girl, unplanned and unwanted, was born. Her adoptive parents named her Alessandra. Her birthright remained a secret for years to come. In Without the One There Can Be No OtherThe Many Forces of Destiny, author Alessandra L. Matteo tells a fictionalized account of her paternal grandmothers life beginning from her birth in Italy, her travels to America for an arranged marriage to an Italian man, her life in the United States overcoming illiteracy, and the formation of her own family. This memoir narrates how Alessandra didnt live a life of privilege or the entitlement of wealth, which was her birthright. Hers was one of hard work, sacrifice, love of family, and the need to keep everyone she loved near. This memoir shares the story of a woman who had an indomitable spirit, was intelligent, courageous, determined, tenderhearted, hard-working, loving, and generous as well as flawed, imperfect, quick-tempered, stubborn, willful and, at times, childish in her expectations of those she loved. Though her life was beset with tragedy, denial, and rejection, Alessandra was an extraordinary womandetermined, courageous, and blessed with a pioneer spirit.

From the #1 New York Times bestselling author of Salt Sugar Fat comes a powerful exposé of how the processed food industry exploits our evolutionary instincts, the emotions we associate with food, and legal loopholes in their pursuit of profit over public health. “The processed food industry has managed to avoid being lumped in with Big Tobacco—which is why Michael Moss’s new book is so important.”—Charles Duhigg, author of The Power of Habit Everyone knows how hard it can be to maintain a healthy diet. But what if some of the decisions we make about what to eat are beyond our control? Is it possible that food is addictive, like drugs or alcohol? And to what extent does the food industry know, or care, about these vulnerabilities? In Hooked, Pulitzer Prize-winning investigative reporter Michael Moss sets out to answer these questions—and to find the true peril in our food. Moss uses the latest research on addiction to uncover what the scientific and medical communities—as well as food manufacturers—already know: that food, in some cases, is even more addictive than alcohol, cigarettes, and drugs. Our bodies are hardwired for sweets, so food giants have developed fifty-six types of sugar to add to their products, creating in us the expectation that everything should be cloying; we’ve evolved to prefer fast, convenient meals, hence our modern-day preference for ready-to-eat foods. Moss goes on to show how the processed food industry—including major companies like Nestlé, Mars, and Kellogg’s—has tried not only to evade this troubling discovery about the addictiveness of food but to actually exploit it. For instance, in response to recent dieting trends, food manufacturers have simply turned junk food into junk diets, filling grocery stores with “diet” foods that are hardly distinguishable from the products that got us into trouble in the first place. As obesity rates continue to climb, manufacturers are now claiming to add ingredients that can effortlessly cure our compulsive eating habits. A gripping account of the legal battles, insidious marketing campaigns, and cutting-edge food science that have brought us to our current public health crisis, Hooked lays out all that the food industry is doing to exploit and deepen our addictions, and shows us why what we eat has never mattered more.

The founder of FiveThirtyEight.com challenges myths about predictions in subjects ranging from the financial market and weather to sports and politics, profiling the world of prediction to explain how readers can distinguish true signals from hype, in a report that also reveals the sources and societal costs of wrongful predictions.

Writing a book is an amazing reward, and I personally found it quite therapeutic, but at first, it was blooming difficult to start writing. Getting started was hard, but I thought of it like a striptease – as in, the first sentence ought to make you feel compelled to read the next and so on, so much so that when you finish the first page, you ought to feel like nothing short of a house on fire will stop you from turning to the second page and so on. However, once I managed to start, I found it difficult to stop. I was carried away, and I kept amending and could not let go or leave the words alone. Like a roller coaster, life has many ups and downs; however, with true pain and inner strength through travelling the journey, you must remain determined to move towards the light on this roller coaster of life that never stops. So I take you through my journey of that roller-coaster life, moving from the dark with the Sloth, to the retreat with my Rock Bunny, through my soul with the Tiger, to a date and a night with a band and a bunch of flowers, even though I may be referred to as old, fat, and ugly. Then you will see my move across fear with the Hyena, my visit with the Parasite, and finally, at last, my transition towards the light with my Meerkat. Once there at the end of my journey, I reflect upon myself and my own presence and being, and then I move on to question myself. What am I? Am I the Chameleon, the Black Panther, or just your regular everyday Swan, who's a little larger than most birds?
